PROFESSIONAL SUMMARY

Associate Project Lead & Senior Software Engineer with **5+ years of progressive experience** designing and scaling enterprise microservices, high-throughput financial systems, and distributed data pipelines. Proven track record at KFin Technologies and Tech Mahindra in re-architecting legacy monoliths into high-performance Node.js/NestJS microservices, **cutting API latency from >30s to sub-second (<1s)** and processing **10M+ daily telemetry and transaction events** on AWS cloud infrastructure. Recognized with **Outstanding (OS) performance ratings for 2 consecutive years**. Experienced in leading cross-functional engineering teams, driving agile execution, and maintaining 99.9% system availability.

CORE COMPETENCIES

- Microservices & API Architecture:** Node.js, NestJS, Express.js, Java Spring Boot, RESTful APIs, Asynchronous Workflows, mTLS, JWE/JWS Security
- Cloud Infrastructure & DevOps:** AWS (ECS, CDK, S3, Athena, Glue, Kinesis Firehose, Lambda, SQS), Docker, Jenkins CI/CD, Microservices Deployment
- Data Engineering & Pipelines:** Big Data ETL Pipelines, Hadoop Workflows, PySpark, Apache Parquet Columnar Storage, Apache Kafka Messaging
- Databases & Observability:** MS-SQL, MongoDB, PostgreSQL, Query Optimization, Indexing, Prometheus, Grafana, Tempo Observability
- Leadership & Engineering Practices:** Team Leadership (5 Engineers), Technical Mentorship, Sprint Planning, System Design, Code Reviews, Agile/Scrum

PROFESSIONAL EXPERIENCE

KFin Technologies

Apr. 2024 – Present

Associate Project Lead (Promoted from Senior Software Engineer)

Hyderabad, India

- Earned **Outstanding (OS) performance ratings for 2 consecutive financial years** and achieved promotion to Associate Project Lead; currently leading, mentoring, and driving technical delivery for a team of 5 software engineers.
- Re-architected legacy monolithic .NET APIs into asynchronous Node.js microservices, **reducing average API response latency from >30 seconds to sub-second (<1s)** for high-frequency financial transaction workflows.
- Architected core backend services for the **Loan Against Mutual Fund (LAMF)** platform, building event-driven notification systems (SQS + Lambda) for asynchronous PDF generation and real-time email dispatch.
- Engineered scalable log streaming data pipelines (AWS Kinesis Firehose → Glue → S3 Parquet → Athena) processing **10M+ daily events**, reducing log query latency from 15s to <3s while reducing primary MS-SQL database load by 40%.
- Built a secure API integration wrapper for **CERSAI Regulatory KYC** verification using two-way mutual TLS (mTLS) and JWE/JWS payload encryption, serving **30,000+ daily verification requests** for KFin NPS.
- Established full operational observability using Prometheus, Grafana, and Tempo, enabling real-time metrics monitoring and proactive incident resolution.
- Lead sprint planning, architectural design reviews, code quality audits, and automated CI/CD pipeline deployments across AWS environments.

Tech Mahindra

Mar. 2021 – Dec. 2023

Software Engineer

Hyderabad, India

- Designed, deployed, and maintained large-scale **ETL data pipelines using Python, SQL, and Hadoop workflows** for **Three UK Networks**, processing and transforming high-volume network telemetry data feeds.
- Automated daily Hadoop batch processing schedules using Shell scripts and crontabs, eliminating manual operational steps and ensuring **99.9% pipeline execution availability**.
- Implemented automated data validation scripts and quality checks to detect schema drifts and corrupted telemetry records prior to database ingestion.
- Optimized complex SQL queries, database indexing, and table partitioning strategies, boosting query throughput by **>75%** across multi-terabyte data tables.

- Collaborated closely with international product managers and technical stakeholders to scope requirements, align pipeline architecture, and deliver key engineering milestones on schedule.

Tech Mahindra

Dec. 2020 – Mar. 2021

Software Engineer Intern

Bengaluru, India

- Developed backend data transformation scripts and optimized database queries in Python and SQL to support internal enterprise reporting tools.
- Participated in daily Agile standups, code reviews, and automated unit test creation for backend data ingestion components.

KEY PROJECTS

Group SIP (GSIP) – Corporate Investment Portal | *NestJS, MongoDB, AWS ECS, AWS CDK, Jenkins*

- Led backend engineering for a corporate investment platform enabling salary-linked SIP investments across multiple Asset Management Companies (AMCs).
- Architected NestJS microservices and MongoDB schemas, deploying containerized infrastructure on AWS ECS provisioned via AWS CDK with automated Jenkins CI/CD pipelines.
- Implemented secure corporate authentication, automated payroll deduction file parsing, and real-time transaction processing routines.

Comms Dispatcher Microservice | *Java Spring Boot, Apache Kafka, MongoDB, React, REST APIs*

- Developed a high-concurrency, event-driven communication microservice for multi-channel message delivery (Email, SMS, WhatsApp) utilizing **Apache Kafka** for distributed queue processing.
- Designed unified REST APIs for seamless enterprise system integration and created a real-time React monitoring dashboard to track message queue status and API throughput.

AetherProxy Chrome Extension | *JavaScript, Chrome Extension API, Web APIs*

- Built and published **AetherProxy** on the Chrome Web Store, providing developers with an intuitive proxy switcher and IP management tool.
- Engineered background web request interceptors and a responsive popup interface to streamline network proxy routing and environment testing.

EDUCATION

REVA University

Aug. 2016 – May 2020

Bachelor of Technology (B.Tech) in Computer Science & Engineering

Bangalore, India

CERTIFICATIONS

- Back End with Node.js – Full Stack Development
- Front End – Full Stack Web Development
- Microsoft Certified: Azure AI Fundamentals
- Machine Learning
- Data Analysis with Python

STRENGTHS & LEADERSHIP

- **Microservices & Performance Optimization:** Deep expertise in refactoring legacy monoliths, reducing API latency (>30s to <1s) and database query load.
- **Cloud & Event-Driven Architecture:** Skilled in AWS cloud deployments (ECS, Lambda, SQS, Kinesis Firehose, Athena) and Kafka messaging infrastructure.
- **Engineering Team Leadership:** Currently leading a team of 5 software engineers, driving code quality reviews, sprint planning, and mentorship.
- **High-Volume Data Processing:** Hands-on background handling multi-terabyte telemetry data pipelines and processing 10M+ daily events.
- **Cross-Functional Communication:** Proven track record collaborating effectively with global clients, product managers, and enterprise audit teams.
